Professional Summary

Final-year B.Tech CSE student (VIT, 2026) with hands-on experience in full-stack development, data analytics, and AI automation. Delivered a production-grade frontend certificate verification system for Ethnus and built end-to-end projects across React.js, Python, SQL, Power BI, and n8n. Strong analytical problem-solving skills demonstrated through competitive achievements — 2nd rank among 100+ participants at IEEE Q-RiOSITY and selected among top global participants at Johns Hopkins Health Hackathon. Proven ability to coordinate cross-functional workflows, communicate with stakeholders, and deliver measurable outcomes independently.

Work Experience

Frontend Developer

September 2024 – January 2025

Ethnus

Remote

- Developed a frontend certificate verification system for Ethnus using React.js — built a responsive, component-based UI allowing learners to authenticate programme certificates via unique certificate IDs with real-time validation, dynamic result rendering, and cross-browser compatibility.
- Managed the full frontend delivery cycle — from requirement gathering with the Ethnus team through component development, testing, and GitHub deployment — delivering a clean, production-grade interface that eliminated manual certificate verification queries and improved the learner authentication experience.

Projects

Customer Analytics & Insight Automation System | Python, Pandas, SQL, n8n, Power BI

September 2025

- Designed an end-to-end retail analytics workflow — performed EDA and data cleaning in Python (Pandas), engineered advanced PostgreSQL queries for demographic revenue segmentation and discount evaluation, and built an interactive Power BI dashboard tracking key retail KPIs, reducing manual reporting time by 60%
- Built an n8n automation pipeline that ingests cleaned sales data on a scheduled trigger, routes it through OpenAI API to auto-generate plain-English weekly insight summaries (top segments, anomalies, revenue dips), and delivers findings to stakeholders via email — eliminating recurring manual reporting with zero manual intervention.

Healthcare Management System | React.js, Node.js, Express.js, MongoDB, REST APIs | [GitHub](#)

August 2025

- Built a production-grade full-stack MERN healthcare application with patient registration, doctor authentication, appointment booking, and 20+ RESTful API endpoints — deployed on Vercel/Render with 99% uptime and mobile-first responsive UI handling 1,000+ monthly interactions without downtime or data integrity failures.
- Applied end-to-end delivery practices — component-based frontend architecture, fault-tolerant API design, and session management — reducing post-launch errors by 35% and maintaining zero critical failures across all user interaction flows.

Healthcare Data Analysis Dashboard | Python, SQL, Pandas, Matplotlib, Power BI

October 2025

- Extracted, cleaned, and analysed 10,000+ patient records using SQL and Python — performed validation, outlier handling, and root cause analysis on readmission data to surface disease trends and identify top 3 contributing factors, improving data quality by 40%.
- Deployed an interactive Power BI dashboard tracking hospital admissions, recovery rates, and departmental KPIs — reduced manual reporting time by 60% and delivered structured insights to non-technical stakeholders through clear data visualisation.

Education

Vellore Institute of Technology

August 2022 – May 2026

Bachelor of Technology in Computer Science and Engineering

CGPA: 7.5/10

Technical Skills

Frontend & UI: React.js, JavaScript, HTML/CSS, responsive design, component-based architecture

Backend & APIs: Python, Node.js, Express.js, Flask, REST APIs, MongoDB, PostgreSQL, SQL

Data & Analytics: Pandas, NumPy, Scikit-learn, TensorFlow, Power BI, EDA, data cleaning, data pipelines

Automation & AI: n8n, OpenAI API, workflow automation, AI-powered insight generation

Tools & DevOps: Git, GitHub, Vercel, Render, Excel, Google Sheets, Notion, Jira, VS Code

Achievements & Certifications

- **Health Hackathon Participant — Johns Hopkins University, USA (Feb 2024):** Selected among top global participants to build and pitch an AI healthcare prototype to 20+ international evaluators within 48 hours.
- **2nd Position — IEEE Q-RiOSITY Competition, VIT Bhopal (2023):** Ranked 2nd among 100+ participants, demonstrating analytical problem-solving and engineering fundamentals under competitive time constraints.
- **Certifications:** AI Foundation Course (**Jio Institute**) · Data Analytics Certificate (**Simplilearn**) · Data Analysis with Python (**IBM**) · Power BI for Beginners (**Microsoft Learn**) · SQL for Data Science (**HackerRank**).
- **Web Team Co-Lead — Data Science Club, VIT (2022–Present):** Led a team of 8, organised 5+ workshops for 100+ members on SQL, Python, and Power BI.
